Job Title   :   Senior / Officer, System Testing & QA

OVERALL PURPOSE:

- To write and execute manual and automated tests to ensure product quality
- To design and implementing test, debug and make corrective actions
- To test the product before launches to ensure that the product is free from errors and reliable

RESPONSIBILITIES:

- Developing test plans and strategies that cover all aspects of the software development life cycle, including functional, non-functional, regression, and integration testing.
- Executing test cases and scripts, using both manual and automated testing methods, and tracking defects and issues to ensure that software is tested thoroughly and meets the required quality standards.
- Designing and developing automated test scripts and frameworks to increase testing efficiency and reduce the time and effort required for manual testing.
- Generating test reports and metrics that provide stakeholders with visibility into the quality of the software being developed, including defect density, test coverage, and pass/fail rates.
- Continuously reviewing and improving the testing process to ensure that it is efficient, effective, and aligned with industry best practices, including implementing test automation, reducing testing cycle times, and improving defect prevention and detection.

QUALIFICATIONS REQUIREMENTS:

- Working experience in software development (optional)
- Working experience in software quality assurance
- Good knowledge of software QA methodologies, tools and processes
- Experience in writing clear, concise and comprehensive test plans and test cases
- Bachelor's Degree in computer science, engineering, or related fields
- Minimum 3 years of relevant working experience
- Ability to work under pressure.
